## CLUTCH WALL FORMWORK SYSTEM

---

### The cost effective manual wall formwork system

---

The Clutch Wall formwork system is efficient and cost effective, allowing for a quick wall formwork, thanks to its modulation and simplicity.

It is characterised by:

- Modular system using Alisan Panels.
- Quick and simple assembly
- Minimal material requirements.
- Light, not requiring a crane.

---

## assembly

It is very easily assembled; firstly nail some timber posts into the ground, which serve as vertical beams, then place the panels over the timber sleepers and the clutches of the wall. Then position the ties over both sides of the panels, and repeat until the desired wall height has been reached. By using the Alisan Panels as a surface, the dimensions will be 1,97 m wide by 0,5 m high.

---

## clutch

Element that functions as a holder and aligns each side of the formwork structure of the wall.

---

## alisan tie

Element used for securing the clutch and aligning one side of the formwork.
