C-160 Climbing system

Safe

It has been designed carefully considering the complete safety of the operator. It has a work platform that is free of obstructions and a safety railing that is watertight and complete, preventing risky situations during assembly and/or form removal.

Versatile

This system allows piles and walls of climbing cycles with pouring heights of up to 13'-1½" (4 m). It has two assembly possibilities: in the ground or positioning the platform directly on the wall. Its centering system prevents possible deviations in the climbing; its removal is made easily by tilting the climbing assembly (along with the formwork) with a crane.

Torrejon Waste water treatment plant, Spain
The climbing platform C-160 system allows piles and walls of climbing cycles with pouring heights of up to 13'1 1/2" (4 m) to be formed with total safety for the laborers. The assembly of the climbing platform and its safety platform can be carried out on the ground, before positioning it on the wall / pile, or by placing the platforms in the anchorage rings and assembling the platform later. It can be set using either Alisply (straight and radius walls) and Vistaforn Straight and Radius Walls also.

**Features**

- Platform 5'2" (1.6 m) wide.
- For formwork height up to 13'1 1/2" (4 m).
- Platform length for 9'10 1/8" (3 m) formwork lines.
- Designed to withstand the different wind loads at any height.
- Platform designed to withstand 41.7 psf (2 kN/m²) in addition to the weight of the formwork 1320 pounds (600 Kg).
- It has a wide and safe trailing platform.

**Semi-automatic safety device**

The climbing platform uses the systems that allows anchoring of the climbing section using a semiautomatic system; driven by the crane, when it lifts the assembly it releases the safety device in the platform.
More than 65 Years of Experience
