

CORBEL 160 KN

High-capacity support corbel, up to 160 kN.

Alsina

■ Description

Support corbel for vertical loads in provisional work structures, compatible with Alsina T1C Ring anchoring systems. It is designed to support a maximum load of 160 kN, thus transmitting the stress to the concrete facing through the anchoring.

■ Compatible

- Horizontal Multiform.

■ Common Uses

- High slabs.
- Bridge piers.
- Lintels.

■ Properties

- Maximum admissible vertical load: 160 kN.
- Vertical load maximum eccentricity: 200 mm.
- Minimum concrete resistance: 30 N/mm² (depending on the type of anchoring used).
- It incorporates two elevation points located in the system's center of gravity plane, which allows it to be moved in a vertical position.
