

ONE SIDED WALL

System for reaching up to 9 m of wall on 1 side.

Alsina

■ Description

Support structure to create one sided walls. It consists of reinforced brace frames that are coupled to the Alispaly Panel with two horizontal primary beams. Its components ensure the safe transfer of concreting forces by combining assembled steel profiles to the wall formwork and inclined anchors for their positioning.

■ Compatible

- Applies for both Straight and Circular Alispaly.

■ Frequent uses

- Underground car parks.
- Adjoining buildings.

■ Properties

- Simple assembly.
- Easy to move and transport.
- It can be transported by crane, either as a compact unit or in its entirety, depending on the weight.
- Great adaptability to the specifics of different types of projects.
- The design of the brace frames allows for mounting with a wall without requiring additional components.
- It addresses all heights by expanding the adjustment of the elements.
- It offers great versatility for projects with walls varying in height.
