

ALSINA CHAMFER STRIP (reusable)

Alsina chamfer strip is used for the pillar finishing that prevents the concrete grout leakage. This accessory adheres to the panel by a specially designed chamfer without the need to nail and therefore neither without damaging the plywood surface nor chamfer strip which allows its easy stripping and reuse.

The usage of removable Alsina chamfer strip improve considerably the pillar stripping. It can be reused up to 8 times. The chamfer strip is made of a gray plastic body (PVC) and red rubber lips (Polyurethane) that adapts to the panel unions and seal the pillar joints.

CHAMFER STRIP

The plastic chamfer strip in right triangle shape is placed in the formwork to chamfer angles, specially indicated for marking joints in the concrete.

DRIPPER FORM 3X2X2

Dripper form is a finishing piece that is used on projecting facade to provide perfect edges and reduce water damage.
